CHEM 2100 Course Syllabus Spring 2018

Organic Chemistry Lab 1
Chemistry 2100
TIME: 4:00 – 8:45pm Tuesday
Room: 357 Petit Science Center
Instructor: Dr. Jeremiah D. Harden
301 Petit Science Center
Office Hours: Tues 12-3:30; Wed 8:30-11:30; Friday 8:30-11:30
E-mail: jharden@gsu.edu;

Send emails from your GSU email account only not through icollege, and the COURSE TITLE MUST and YOUR NAME be in the SUBJECT of the email

Texts

(1) Chem. 3100 Lab Manual (available free during first lab)

Optional Texts

(2) Experimental Organic Chemistry by Wilcox and Wilcox
(3) Introduction to Spectroscopy by Pavia, Lampman and Kriz

GRADING
*Final Exam: 100 points
*Final Report 100 points
*Midterm Report 50 points
Quizzes, homework, *, **notebook, attendance, and preparation 150 points

*Must be submitted to receive a passing grade.
**Notebooks must be picked up within three weeks after final grade deadline (after which time they will be discarded)

A+: 96% A: "92%; A-: 89%; B+: 86% B: 82% B-: 78%, C+: 76% C: 72% C-: 68% etc.

I DO NOT CURVE. I WILL ASIGN THE LETTER GRADE YOU EARN.

Tuesday Feb. 27th Last day to withdraw with grade “W”
Thursday April 20th Final Exam during pre-lab lecture time in same room
Tuesday April 24th by 6pm Final report and Notebook are Due

Please bring me a schedule of your RELIGIOUS HOLIDAYS OBSERVANCE by the SECOND WEEK of class. If you fail to do so you might miss important quizzes for this course.
**Course Objective**

In the first part of this project, you will isolate and purify compounds from natural products and you will practice liquid distillation and analysis of a known liquid sample. In the second part of the semester, three unknown liquids will be purified by distillation and the structure analyzed. Spectroscopy is an integral part of a modern organic chemistry laboratory. Therefore, you will have lectures throughout the semester on infrared spectroscopy (IR), and mass spectrometry (MS) where you will learn the fundamental principles behind each technique and how to interpret spectra in the assignment of organic structure. These spectroscopic techniques will be used during the laboratory portion of the course.

You will be held responsible for the material discussed in lectures and that assigned from the textbooks in all quizzes and final exam.

**Part 1**

Weeks 1-5  Techniques for isolation and characterization of organic compounds

Report sheets are to be filled out every week as the work is completed.

**Part 2**

Weeks 6-13 Term project; purification and identification of unknowns (Final report)

**Final Report:** neat liquid, low boiler and high boiler: A good boiling point is the most valuable information you will obtain from distillation. Check what substances have the boiling points close to the one you have measured. You will find many different types of compounds with the same boiling point. Narrow down to those substances that contain the functional groups you tested in the lab. Then use the density and refractive index (RI) to assign the best candidate. If you have the MS, that gives you the molecular weight, draw structures and play with the fragmentation patterns to match the one given. When it comes the time for the identification of your unknowns DO NOT LIMIT THE SEARCH TO THE DATABASE FOUND IN THE INTERNET. IT IS WRONG. SEARCH THE REFERENCE BOOKS (in the lab, also available in the library).

The final written examination will test your knowledge and comprehensive of basic techniques and processes employed in an organic laboratory and also the spectroscopic techniques used during the semester.

**WHAT IS IN YOUR FINAL?**

1. CONCEPTS AND CALCULATIONS USED IN FIRST 4 EXPERIMENTS, EXTRACTION, SUCH AS NEUTRALIZATION, DENSITY, SOLUBILITY(BENZOIC ACID/ACETANILIDE), SUBLIMATION, RECRYSTALLIZATION, MELTING POINTS, ETC
2. ALL CHEMICAL TESTS TO DETERMINE FUNCTIONAL GROUPS OF ORGANIC COMPOUNDS ASSIGNED IN THE BOOK, NO ONLY THOSE THAT YOU'VE CARRIED OUT for your unknowns, ALL TAUGHT, you need to state the changes during the reactions (colors, heat, precipitates or any other observations, no only the name of the test)
3. DISTILLATION (SIMPLE AND FRACTIONAL, DIFFERENCES, equipments used)
4. GAS CHROMATOGRAPHY, CONCEPTS AND % COMPOSITION DETERMINATION OF A MIXTURE,
5. IR interpretation is 35 % of the final, PRACTICE WITH THE HOMEWORK AND QUIZZES
6. MASS SPECTROSCOPY, PRACTICE FRAGMENTATIONS
**Miscellaneous:**
1. Department of Chemistry Statement on Student Integrity applies to this course (see below).
2. Attendance to **lecture** and **lab** will be recorded. Absences can result in loss of points and lower grades (Sign-in/out of lab required).
3. Lab books must be recorded in ink at the time the measurements are made. **They will be to be graded during the lab section without announcing! Lab notebooks must be bound.**
4. **Safety glasses** are required and must be worn at all times. *The student must bring a pair of safety glasses/goggles to the first lab. These may be purchased at the GSU Bookstore, the Georgia Bookstore, and most hardware stores. Students who are unable or forget to bring their glasses may buy a pair from their lab Coordinator by filling out a breakage form in the lab. Students who obtain glasses in this manner will pay for them at the time they check out of the lab. Students will not be allowed into the lab without their glasses/goggles.
5. **Gloves MUST be worn when handling chemicals.**
6. **SAFETY, SAFETY, SAFETY, SAFETY, SAFETY.** Failure to follow safety procedures will result in **EXPULSION** from that lab session with no make-up allowed and loss of credit. **SAFETY, NOTHING GOES INTO THE SINK, USE THE HOODS!!! HOODS, HOODS, HOODS!!**

**DEPARTMENT OF CHEMISTRY POLICY STATEMENT REGARDING STUDENT INTEGRITY:**
The Department of Chemistry follows the university policy on academic honesty published in the “Faculty Affairs handbook” and the “On Campus: The Undergraduate Co-Curricular Affairs handbook.” Any suspected offenses may be referred to the Department Chair for appropriate action.

All tests taken must represent your individual, unaided efforts. To receive or offer information during an examination is cheating. The use of unauthorized supplementary materials during tests is also cheating. All laboratory work performed during this course must reflect your individual effort. Only original data obtained by your own laboratory experimentation are to be used, except when specifically authorized by your laboratory professor. Data from supplementary sources (handbooks, reference literature, etc.) must be clearly referenced (title, author, volume, page(s), etc.). Falsification or destruction of data constitutes cheating.

*Very important:* **The following is a tentative schedule** of procedures and activities for Chem. 3100 Summer 2012. Changes and deviations from this syllabus will come and will be announced during class (quizzes, homework, and others). **SHOW UP ON TIME to lectures to know what is going on.**
